# Kaleem OOAD Coursework

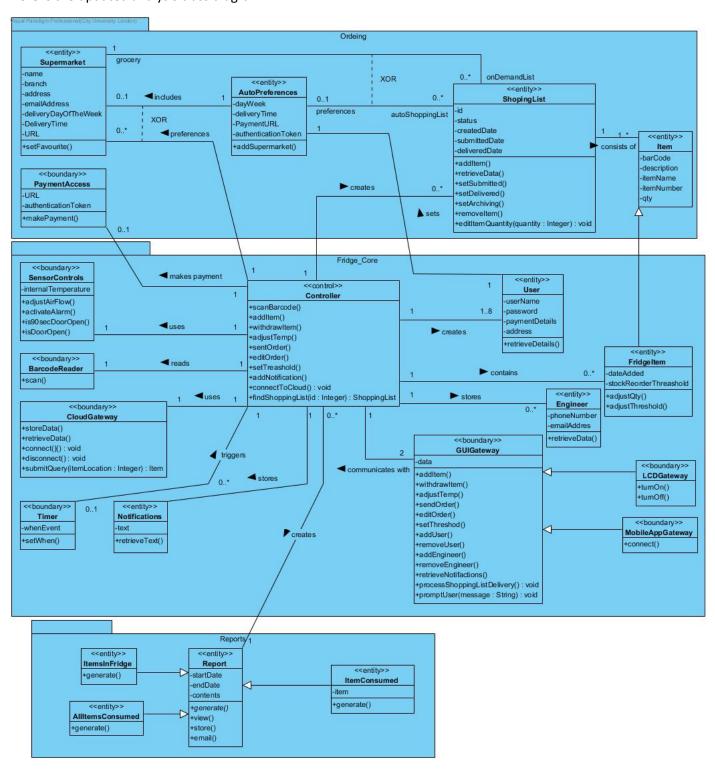

## Question 1: Use case realization

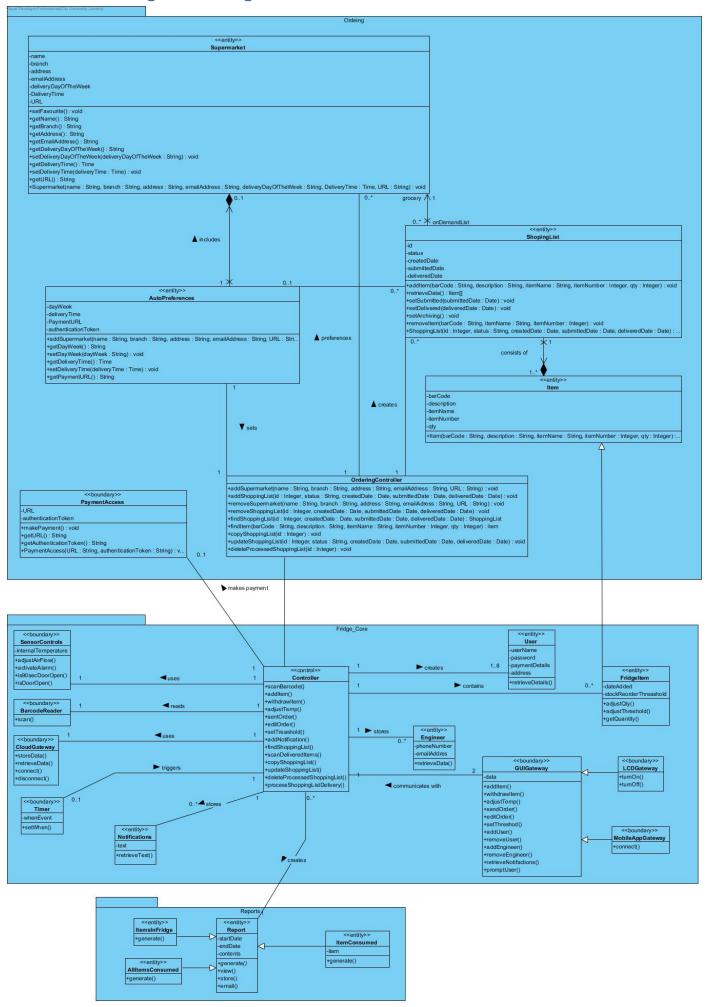

Whilst creating the sequence diagram, quite a few operations were found that I had to add to the analysis class diagram as shown below:

Class	Added Operations
GUIGateway	ProcessShoppingListDelivery()
	PromptUser(message:String)
Controller	connectToCloud()
	findShoppingList(id:Integer)
CloudGateway	Connect()
	submitQuery(itemLocation:Integer)
	disconnect()
ShoppingList	editItemQuantity(quantity: Integer)

#### Here is the updated analysis class diagram:

# Question 2: Design class diagram

## Question 3: State machine

[itemsArchived < items]

Visual Paradigm Professional (City University London) addItem / new Item(itemData), items++ addltem() / items = 0 BeingCreated entry / status = "incomplete" after( 30 days ) removeltem removeltem do / wait for commands Deleted [ItemID exists, items > 0] / destroyltem(ItemID), itemssetSubmitted [items > 0] Submitted entry / status = "submitted", submittedDate = currentDate do / wait for shopping list to be delivered setDelivered **Delivered** entry / status = "delivered" process ShoppingList / itemsProcessed = 0 BeingProcessed entry / status = "being processed" do / wait for all items to be processed [itemsProcessed < items] processItem [itemsProcessed < items] / itemsProcessed++ [itemsProcessed == items] Processed entry / status = "processed" archiveShoppingList setArchiving / BeingArchived itemsArchived = 0 do / wait for all items to be archived exit / status = "archived"

[itemsArchived == items]

archiveItem [itemsArchived < items]

/ itemsArchived++
